

WE ARE HIRING: FRONT-END DEVELOPER

Department	Technology & Product
Role	Front-End Developer
Location	Remote
Employment	Full-Time · Flexible Work Structure
Primary Stack	React · TypeScript · Git/GitHub
Application	CV + Cover Letter + GitHub/Portfolio

BUILD DIGITAL PRODUCTS THAT ELEVATE LIFE IN AFRICA

AfriVate Technologies Ltd is looking for a thoughtful, dependable Front-End Developer to build fast, accessible, and responsive web experiences. You will translate product requirements and designs into maintainable React interfaces, collaborate with product and backend contributors, and help strengthen the quality of AfriVate's digital products.

WHAT YOU WILL DO

- Build reusable, responsive user interfaces with React and TypeScript.
- Translate product designs and requirements into clean, accessible experiences across mobile and desktop.
- Integrate REST APIs and backend services, handling loading, errors, authentication, and edge cases carefully.
- Maintain shared components, application state, routing, forms, and client-side data flows.
- Write tests, review pull requests, investigate defects, and improve performance and usability.
- Use Git and GitHub for branches, pull requests, code review, issue tracking, and collaborative delivery.
- Keep assigned work and progress current in the AfriVate Portal and communicate with the team through Slack.

CORE REQUIREMENTS

- Practical experience with **React, JavaScript (ES6+), TypeScript, HTML5, and modern CSS**.
- Strong understanding of components, hooks, state management, forms, routing, and API integration.

- Comfort with **Git and GitHub**, including feature branches, pull requests, merge conflict resolution, and code review.
- Ability to build responsive interfaces and apply accessibility fundamentals.
- Ability to debug browser issues and communicate technical decisions clearly.
- A portfolio, deployed application, or GitHub repositories demonstrating relevant work.

USEFUL TECHNOLOGIES

Experience with some of the following is valuable; candidates are not expected to know everything:

- Vite, React Router, Tailwind CSS, component libraries, and design systems;
- TanStack Query or similar server-state tools; Context, Zustand, or Redux where appropriate;
- Backend-as-a-service platforms such as Supabase, Firebase, or Appwrite;
- Vitest/Jest, React Testing Library, and Playwright for end-to-end testing;
- PWA development, browser performance, web security, and CI/CD workflows;
- Figma collaboration and basic UX judgement.

WHAT WE VALUE

- Ownership, integrity, reliability, and attention to detail;
- Readable code and pragmatic engineering decisions;
- Willingness to learn, receive feedback, and document work;
- Respectful collaboration and consistent delivery.

ROLE BENEFITS

Non-binding until signed: Any salary, stipend, data support, equity, or benefit is effective only under a written instrument signed by the CEO (or authorised signatory). Advertisements and interviews create no entitlement. AfriVate may engage successful candidates as unpaid Internal Contributors under AFRI-ICEF-01 until such an instrument exists.

- **Remote, flexible work:** A role with a flexible work structure focused on accountability and outcomes (full-time expectation only if stated in the signed instrument).
- **Equity participation (if offered in writing):** Where the CEO issues a formal equity award, indicative terms may include up to a 2% equity stake vesting over two years, subject to the award document, vesting terms, continued qualifying service, and applicable company documentation. No equity exists without that signed award.
- **Monthly data support:** A ₦20,000 data stipend to support reliable remote work.

- **Professional growth:** Practical learning opportunities, direct exposure to product and engineering decisions, and space to strengthen your technical judgement.
- **Meaningful ownership:** The opportunity to shape products, engineering standards, and user experiences from an early stage.
- **Career development:** Clear responsibility, portfolio-strengthening work, cross-functional collaboration, and increased leadership opportunities as the company grows.
- **Purpose-led impact:** Work on technology intended to improve connectivity and elevate life across Africa.

HOW TO APPLY

Email the following application materials to **afrivatehr@gmail.com**:

- Your current CV;
- A tailored cover letter explaining why you want to join AfriVate and how your experience fits this role;
- Your GitHub profile; and
- Your portfolio, deployed applications, or relevant project links.

Required email subject: APPLICATION FOR FRONT-END DEVELOPER — [YOUR FULL NAME]

Portfolio note: Identify one project you are proud of, what you personally contributed, and the most difficult technical problem you solved.

Applications sent without the required subject line or cover letter may not be reviewed.

AfriVate welcomes candidates whose practical ability is demonstrated through projects and sound engineering judgement, including strong early-career developers.
